

New Pricing Structure (effective September 1, 2008)

FOCUSED ON YOUR PROFITS

MEDcom is intuitively aware of the costs you face working within the medical industry. As the cost of doing business goes up and insurance reimbursements go down it is getting tougher day by day.

Not only are you faced with decreasing reimbursements,

but as you are aware, cash flow is grossly affected by things like frequent payment holds by Medicare.

We continue to work closely with our clients to address changes by the government and insurance companies in regards to claims processing.

For those of you we have worked with from a consulting roll, you have found that we can often do much to increase your bottom line profitability. We can streamline your business, reduce your overhead and/or increase your income and thus your profitability. That is our number one concern.

In light of our concern for your business we are actu-

ally offering some ways to save money with us.

Typically in the past have not offered 'Service or Support' contracts. We still are not going to offer contracts that 'expire', even if the hours have not been used. We are going to offer, however purchases of blocks of time at some significant reduction to our standard hourly rate.

We unfortunately can not offer an infinite time frame for the unused hours, but we can and will provide 3 years from the date of purchase to use those hours.

BLOCK PRICING:

All times are assuming internet connection support. We typically use LogMeIn, VNC or GoToMyPC

- ◆ 10 Hours \$100/hour
- ◆ 5 Hours \$125/hour
- ◆ As needed \$150/hour (our standard rate)

Coming Events from MEDcom

New Product Release:

Complete Claims Generation II.

MEDcom Complete Claims Generation II is scheduled for release on Nov 30th 2008 with a new face and design and a lot of new features since the original Complete Claims released in 2001. Complete Claims will provide the organization the ability to format, edit and create claims in the ANSI X.12 format for Availity, LLC clearing house. Complete Claims will also read the 997 Acknowledgement

report and report errors in "plain English" as well as provide links back to the original claim file sent (using the ICN-Internal Control Number).

The Program also provides the ability to refer back to the original claim from the EBR, IBR and DPR files returned by Availity to the submitter. The program gives you the ability to identify claims with no responses, claims with errors and claims being processed for payment by the insurance companies (for those companies that

report this information).

There are some screen shots available on our webpage.
